

PP MG

POLYPROPYLENE MEDICAL GRADE

Material description

PP MG (medical grade) is a heat - stabilised polypropylene. The good chemical resistance, low moisture absorption and hydrolysis resistance are ideal for applications in medical technology. The raw material is batch - managed and meets the requirements of the FDA and USP VI. The material can be sterilised very well.

These technical data have been determined as average values by our suppliers from many individual measurements. In all measurements, the test specimens were tested in the dry state. We pass on the data with reservation. The table does not claim to be complete or correct. Material technology is subject to constant further development. No rights or guarantees can be derived from it. Own tests are necessary because the environmental and operating conditions (humidity, temperature, mechanical forces, radiation and chemicals, etc.) set limits in the application.
